This is a port of [Simon Tatham's Portable Puzzle Collection](#), a collection of 32 single-player logic games. I used to very much enjoy playing this on PalmOS, so I decided to take it with me when I bought a G1.

Bug reports, feature requests etc. to [chris@boyle.name](mailto:chris@boyle.name) or directly into the [issue tracker](#) at github. Want to translate Puzzles into your language? Just send me a new version of [strings.xml](#) and I'll include it. If you're feeling very kind, you could translate the documentation as well, like [Helge Kreutzmann has into German](#), but that's a lot of work. :-)
