This is a very primitive script to put a Google Reader icon in the system tray. It'll ping Reader every 5 minutes, light up when you get new items and, er, that's it for the moment. You need to put your Google login and password at the top of the script (after setting file permissions appropriately, of course). You also need some images for readerold.png and readernew.png (I have no Free examples to put here).

Opinions my own unless otherwise stated. © Chris Boyle 2010-2011, comments © their authors, icons ©/™ their owners. Trouble? Use the [public bug tracker](#) or [contact me](#).
